

Books 3–4 v3: adopted decision and implemented migration

Revision: book34-lesson-balance-v3-20260915. The owner explicitly accepted the placement proposal and requested revision of the books, answers, teacher guides and curriculum records for subsequent coding-agent integration.

Adopted and implemented

Decision	Current disposition
Split former 3.2.2	New 3.2.2 teaches the limited derivative; new 3.2.3 teaches feasible profit maximisation. Each has its own target and answer.
Move former 3.2.3	New 4.1.1 teaches entry, exit, economic profit and long-run equilibrium. It remains in Year 1, now assessed with Book 4.
Change chapter titles	3.2: Volkomen concurrentie: productie en winst. 4.1: Van concurrentie naar monopolie.
Revise Book 3 consolidation	The Kweekkorrels target now compares two short-run moments. Formal entry/long-run operations and the third source are removed from this target.
Repair trade dependency	Closing review 38b now uses a bounded short-run firm calculation; the forward pointer names the new Book 4 opening.
Defer former 4.3.5	Collective bargaining/cao/agreement-policy goals move out of Year 1. Source and answer are preserved separately, without an invented later-year allocation.
Labour mixed unit	Former 4.3.6 becomes 4.3.5; the wage floor is explicit, no cao prerequisite; the productivity case no longer requires training-policy assessment.
Budgets	Year 1 remains 12/12/14/17 = 55. Book 3: 6+4+4. Book 4: 5+7+5. Chapter ceilings: 50/40/40 and 50/60/50, excluding answers.

Authority for this revision

The adopted v3 outlines determine intended scope. The delivered books and answers contain the actual teaching and assessment candidates. Existing blueprint placement and empty placeholder records are migration inputs, not instructions to reverse the owner's chosen design. Mathematics, source fidelity, protected-source boundaries and actual publication/merge permissions still apply.

All 31 target candidates in `../curriculum/targets/` contain actual questions, answers, source excerpts, asset references and hashes. They are not independently approved merely because they have been extracted and checked by the author. The integration agent must preserve this distinction and must not label placeholders reviewed-final by bulk status change.

Timing and later-year boundaries

This limited migration does not close the existing one-lesson workload issues at 3.1.2, 3.1.3, 3.1.5, 4.2.4 and 4.2.5. The current teacher guides show these as unresolved, not as newly approved two-lesson units. Other lesson durations are design estimates, not classroom measurements.

The deferred labour institutional goals need a named receiving lesson and a funded placement before later targets assume mastery. Possible thematic homes include later collective action and labour/macroeconomic reasoning, but no numeric destination or additional later-year lesson has been authorised in this package.

Integration boundaries

Use `../HANDOFF.md` for import instructions. Preserve the previous edition and its validation history. Do not overwrite Book 1 first edition, publish its second edition, or change Book 2. Do not run the original v2 authoring scripts over the revised manuscripts. Rebuild with the supplied v3 build commands.

The full old/new mapping is `paragraph-migration-v2-to-v3.csv`. IDs are version-qualified: old 3.2.3 and new 3.2.3 are different topics; old 4.3.5 and new 4.3.5 are different topics. Approvals do not travel through a numeric match.

No live repository has been modified by this local delivery. No merge authorisation is supplied.
